

SonaVision™

Video Surveillance

"The cameras we recently added have been very helpful. As you know, with our growing number of employees, incidents in the parking lot and elsewhere are on the rise. Obviously, this can be a potential liability as an employer. Having taped coverage of these events has already come in handy for us."

What happens when you're not watching?

We can show you

Most trouble happens out of sight, not in plain view. Anytime you're not looking, criminals can find an opportunity to go to work. If all of your property were kept under watchful eyes, night and day, these criminals would find it much harder to do their jobs. And wouldn't we all like to put them out of business?

We have given you ears

Now we can give you eyes

For more than 40 years, Sonitrol has made it possible to hear what's happening when you're not around. Our Verified Audio Detection system gives our clients the fastest possible response time, with the unique protection of sound detection. Whenever Sonitrol's audio sensors pick up abnormal activity on your premises, a signal is sent to a Sonitrol Central Station, where professional operators listen to live audio transmissions from your site. Once the alarm is verified, they can immediately call the proper authorities, or reset your system without disturbing you or safety officials.

See and supervise

SonaVision™, Sonitrol's video surveillance solution lets you see what's going on 24/7. SonaVision allows Sonitrol's operators to see what's happening anytime an activation signal is received. And you can use SonaVision to remotely manage operations at your facility. Working in concert with Verified Audio Detection, Access Control, and any other modular components of your Sonitrol system, SonaVision offers greater security for your property. Take a look at what SonaVision can do for you.

SonaVision™

Farseeing advantages.

Verification

Municipalities across the country have adopted Verified Response ordinances to address the false alarm issue, with most requiring verification prior to the police being dispatched. SonaVision verified surveillance gives police the real-time information they need to respond to the scene. Here's how: Once an alarm signal is received, video images are remotely viewed by trained professionals at the Sonitrol Central Monitoring Station. Once the video is verified, our monitoring professionals relay information to police dispatch in real-time, giving dispatchers a quick, accurate assessment of the event — resulting in a rapid response to your alarm.

Notification

Receive e-mail notifications when your alarm system is armed and disarmed with open/close video reports. Now you have the ability to always know who is in, whether anyone was with them, and if they damaged or carried anything away!

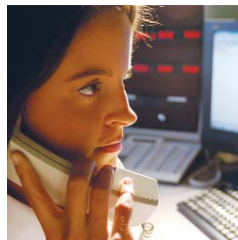

Exploration

Let your vision expand. Look in and manage your business from anywhere and at any time — you have control over your operations with 24-hour visibility. You have the ability to schedule video tours of your business sent to you as often as you wish as a video e-mail.

Satisfaction. We guarantee it
Sonitrol backs every security system we provide with an unparalleled commitment to service that includes our:

- Service Guarantee
- Satisfaction Guarantee
- False Alarm Guarantee
- Performance Warranty

Sonitrol. We're looking out for you.
